Hi, I'm Gabriel, co-founder of Superpower. Superpower is a video therapy that match the users with their perfect therapist, we develop an algorithm that find each user, a matching therapist not only based on the therapist qualifications, but also language, ethnicity, culture, and more. We've recently raised a pre seed funding round, and we're looking to grow very fast, even with a current number of users. There are a lot of transactions processed on the app. And we know how important it is for all this transaction to be managed correctly.

We've completed a pre seed funding round so far, and we developed our application which is now launched in AppStore, and Google Play, as we're looking to grow continuously,

We know that how important is for all the aspects to be set up correctly on Superpower, including our finances, even now with the current number of users, it's very hard to manage all the transactions that happen on the business, and it will be even harder once we grew up.

We really appreciate the advice and help that we receive from Smart Accounting, it was very important for us to find somebody who could help us with our finances, but also who can really understand how our business runs.

We didn't want an accountant who communicated only the numbers but who could understand really the entire picture. We definitely found what we were looking for in Smart Accounting. They helped us with business opportunities and opportunities to grow.

And they freed up so much of our time, which we can use into developing our app and help our users. It's great to work with such competent accountants who can really understand our business and they stick to the cost they invoice us for later realise how much money we actually save by working with Smart Accounting. They've been great so far, and we are confident that they will help us to the next steps as our company grows. Thank you
